New Definition Of Med Devices To Include Nebulisers, Syringes

NEW DELHI:- The health ministry is set to notify a new definition of medical devices which will expand the span of regulation to cover all such products, including diagnostic equipment, nebulisers, syringes as well as stents and other implants. The notification, already approved by the ministry, is expected to be notified by the end of this week, official sources told. "The new definition for medical devices will be aligned with that of the International Medical Device Regulators Forum (IMDRF) and one which is globally accepted," an official said. Once the new definition is notified, all medical devices will fall under the health ministry's regulatory purview and will have to undergo scrutiny by the Central Drugs Standard Control Organisation (CDSCO) before entering the market. This means companies will have to seek approval from CDSCO for manufacture, import and distribution of any medical device. Besides, they will also have to report adverse events and carry out clinical trials for new products as per regulatory requirement. All medical devices manufactured or sold in the country will also be monitored for quality, safety and efficacy. At present, only 35 medical devices are notified as drugs in India, of which 23 are regulated and the rest will come under regulatory purview from next year, according to the ministry's earlier notification. The regulator has also prepared a roadmap for regulating these products after consultations with various international regulators under IMDRF and inter-ministerial consultation. "The idea is to have a roadmap for medical devices so that manufacturing of products can be promoted in the country. Approval, certification and registration from a central authority under the health ministry will help in strengthening the credibility of 'Made in India' medical devices," the official said. The government is also working to bring a separate law to regulate medical devices. Besides, it is mulling an overarching pricing policy to cap trade margins of all medical devices. The medical devices industry, currently pegged at around \$7 billion in India, is growing at a CAGR of 4.5%. The sector is projected to touch \$9.6 billion by 2022. The implementation of regulation will start with licensing, which will be voluntary for 18 months and become mandatory after 12 and 24 months, depending on their classifying category based on risks. Companies will be required to give details of products including design, shelf life and raw material along with other proof of evidence that their products are safe and efficacious. According to sources, all medical devices in the country – whether manufactured locally or imported – will be completely under the regulatory framework within three-four years. Medical device manufacturers, lobbying for a separate regulation for their products distinct from drugs, say all devices must be regulated to create a level-playing field and ensure patient safety.

D C G का पत्र Drug Control

New Delhi 23. Sep. 2019:- It Has Been Reported from Other Countries That Some Ranitidine Medicines, Contain a Nitrosamine Impurity Called N-Nitrosodimethylamine (NDMA) at Low Levels. The N-Nitrosodimethylamine (NDMA) Has Been Classified By International Agency For Research On Cancer (IARC) As Probably Carcinogenic to Humans The Drug Ranitidine Are Approved For Multiple Indications In The Country And Available In Various Formulations Including Tablets, Injections Etc The Drug Ranitidine Is a Prescription Drug Included In Schedule H And Therefore It Should Be Sold By Retail Only Under Prescription Of Registered Medical Practitioner (RMP) In View Of Above, You Are Requested to Communicate To The Manufacturers Of Ranitidine API & Formulations Under Your Jurisdiction To Verify Their Products And Take Appropriate Measures To Ensure Patient Safety Action Taken In The Mater May Please Be Intimated To This Office At The Earliest.

AstraZeneca's Combo Lung Disease Therapy Fails To Win FDA Approval

The U.S. Food and Drug Administration declined to approve AstraZeneca Plc's combination therapy to treat smoker's lung, the drugmaker said on Tuesday. AstraZeneca said that it will work closely with the FDA regarding next steps, including submitting results from an additional late-stage study, which was not completed at the time the marketing application was submitted to the health regulator. The therapy,

PT010, was approved in Japan in June as a triple-combination therapy to relieve symptoms of chronic obstructive pulmonary disease (COPD), AstraZeneca said. Colloquially known as smoker's lung, COPD is a progressively worsening and potentially deadly condition that affects more than 380 million people worldwide, primarily caused by smoking but also by occupational hazards such as air

pollution or chemical fumes. COPD is predicted to be the third leading cause of death by 2020, according to the British drugmaker. The setback comes as AstraZeneca tries to catch up with domestic rival GlaxoSmithKline's Trelegy, which is delivered through inhaler Ellipta. That treatment pulled in 156 million pounds in sales last year in its use against COPD.

Nucala Is The First Biologic Approved In The US For Six To 11-year-Old Children With Severe Eosinophilic Asthma

GlaxoSmithKline:- announced that the US Food and Drug Administration (FDA) has approved Nucala (mepolizumab) for use in children as young as six years old who are living with severe eosinophilic asthma. Nucala is the only targeted biologic to be approved for the condition in the six to 11-year age group in the US. Dr Hal Barron, Chief Scientific Officer and President, R&D, GSK, Mob:- 09711110134, 09873604249 said: "Children with severe eosinophilic asthma currently have limited treatment choices available to them. We believe this important new indication for Nucala is a significant development for these children and their families".

Tonya Winders, CEO and President, Allergy and Asthma Network, noted: "As a mother of children who suffer from asthma, I know first-hand the huge impact it has on a family, from the constant worry about your child being hospitalised, to practical issues like arranging time off work to care for them. Having Nucala approved as the first biologic for treating severe eosinophilic asthma in this young age group represents a significant step forward for the asthma community." The FDA approval is supported by an open-label study, conducted in children aged six to 11 years and suffering from severe eosinophilic asthma, that investigated Nucala's pharmacokinetics, pharmacodynamics and long-term safety. Evidence from adequate and well-controlled trials in adults and adolescents also supported approval in this age group. The 52-week long-term phase of the study showed that the safety profile in paediatric patients aged six to 11 years was similar to the known safety profile in patients aged 12 years and older. Dr Daniel Jackson, MD, Department of Pediatrics, University of Wisconsin, added: "Severe eosinophilic asthma in children is a complicated condition that can be extremely challenging to treat. Nucala has made a difference for many adults and adolescents living with severe asthma. This approval is an important development, giving physicians like me a much-needed option to consider for our paediatric patients". Nucala (100mg dose subcutaneous injection) was first approved in 2015 as an add-on maintenance treatment for patients with severe eosinophilic asthma aged 12 years and older. This approval (40mg dose subcutaneous injection) extends the current indication in the US for Nucala to patients aged six to 11 years. Nucala has been approved for use as an add-on treatment for severe eosinophilic asthma in patients aged six years and older in the EU since August 2018.

New Device To Treat Type 2 Diabetes, Obesity: Study

London:- Researchers have found that a newly tested medical device, called "Sleeveballoon", mimics the effects of traditional bariatric surgery in rodents and produces impressive results on body weight, fatty liver and diabetes control. Sleeveballoon is a device that combines a balloon with a connected sleeve, which covers the initial parts of the small intestine. It is inserted into the stomach and bowel during minimally invasive surgery under general anaesthetic. For the study, published in the journal EBioMedicine, researchers compared the effects of the Sleeveballoon and traditional bariatric surgery on 30 rodents fed with a high-fat diet, achieving very similar results. Results were also compared to rats, with the new device reducing food intake by 60 per cent and resulting in a 57 per cent reduction in fat mass. The effect on diabetes was similarly impressive with blood glucose levels dropping by 65 per cent. "Gastric bypass surgery is a highly effective treatment of obesity and type 2 diabetes. However, very few eligible patients, only around one per cent, are offered surgery and some also prefer less invasive approaches," said study's lead author Geltrude Mingrone, Professor at King's College London. During the study, the research team found that the metabolic effects of the Sleeveballoon device are similar to those of the gastric bypass but have distinct advantages over the traditional method. In both, insulin sensitivity and heart functions improved. "However, while gastric bypass causes a rapid rise in post food blood glucose levels which can cause hypoglycaemia, the Sleeveballoon induces a slowing down of digestion which has a steady effect on blood sugar levels," Mingrone said. "This helps control appetite and hunger, keeping the person fuller for longer and substantially reduces weight."

Granules India To Exit From China Joint Venture

Granules India Ltd said on Monday it will divest its entire equity shareholding in its Chinese joint venture Granules Biocause Pharmaceuticals. The latter is an equal joint venture between Granules India and Hubei Biocause Heilen Pharmaceutical with manufacturing facility at Jingmen in China. In 2007, Granules formed the joint venture to ensure a regular supply of Ibuprofen active pharma ingredient (API) to support its requirements for manufacturing pharma formulation intermediates and finished dosages. The company said environmental issues business uncertainty in China. To pollution, Granules Biocause had invested and will continue to invest (capex), which is contrary to ing capex outflow and free cash the additional API supply will options and having a joint ven-lbuprofen API continuity," it said existing manufacturers have intention to increase capacity. announced their intention to Granules said it has a supply and Ibuprofen API supply will not ment will continue. In addition, approved suppliers of Ibuprofen market. "Granules India's decision to dilute the stake of this joint venture will not impact its commitment of achieving the profitability target provided for the year even without any additional joint venture's contribution in the consolidated net profit. Further, sale proceeds from this transaction will enable Granules India's cash position and will eventually reduce the net debt position,

All India Institute Of Medical Sciences In Delhi Wins Top Cleanliness Award, Bags Rs. 3 Crore

New Delhi:- The All India Institute of Medical Sciences (AIIMS) on Friday bagged the first prize from the Centre for maintaining cleanliness within the institute premises and showing dedication towards the mission of the 'Swachh Bharat Abhiyan'. Union Health Minister Harsh Vardhan, along with Minister of State for Health Ashwini Kumar Choubey, presented the Kayakalp Awards to winners during an event held at the India Habitat Centre here. AIIMS was awarded the first prize of Rs. 3 crore. The Health Ministry had prepared a list of central government institutions, district and private hospitals and community health centres for their work in maintaining high standards of sanitation and hygiene in public health facilities and awarded these hospitals under the 'Kayakalp Awards Scheme'. Dr. Harsh Vardhan commended the awardees and said cleanliness is no more a one-time activity but is integrated in our day-to-day practices and should become a habit. Kayakalp has played a pivotal role in reinstating and reconfirming the trust and confidence of the community in public health facilities, he said. He added that the zest and zeal shown by the hospitals and their

collective efforts in improving cleanliness, hygiene and infection-control practices should continue unabated. The Union health minister further stated that health and hygiene are the top priorities of Prime Minister Narendra Modi. He union ministers also released the Kayakalp coffee table book documenting the success stories of the award-winning health facilities. Under the Central Government Hospitals A category, the first prize of Rs. 3 crore was given to the All India Institutes of Medical Sciences (AIIMS), Delhi. JIPMER, Puducherry, was judged the runner-up in this category and awarded Rs. 1.5 crore. The Postgraduate Institute of Medical Education and Research (PGIMER), Chandigarh, and the Safdarjung Hospital, Delhi, won the Commendation Award of Rs. 50 lakh each. In the Group B category, the winner was Shri Vinoba Bhawe Civil Hospital, Silvassa which bagged Rs. 2 crore, with AIIMS Bhubaneswar winning Rs. 1 crore as runner-up. North Eastern Indira Gandhi Regional Institute of Health and Medical Sciences, Shillong, Lokopriya Gopinath Bordoloi Regional Institute of Mental Health, Tezpur, and AIIMS, Bhopal, each won Rs. 50 lakhs as Commendation Awards. Dr. Harsh Vardhan also felicitated the district hospitals, PHCs and CHCs, wherein 29 hospitals won the first prize, 14 were awarded the second prize and the third prize was won by 2 hospitals. The Kayakalp Award was instituted as part of the Swachh Bharat Abhiyan on May 15, 2015 as a national initiative to recognise and felicitate public health facilities that demonstrate high levels of cleanliness, hygiene and infection-control measures on promoting cleanliness in public spaces.

Scientists At City University Of Hong Kong Distinguished Cancer-Derived Nanovesicles By AuNIs-LSPR Biosensor

Cancer has always been a dreaded disease, which claims millions of life annually. The available cancer treatment options include chemotherapy, radiotherapy, and surgery depending on the location and stage of malignant behaviour of cancer. The early diagnosis of cancer has often been seen as a boon for the treatment of patients suffering from cancer, which requires biopsy; a method which requires collection of tissue sample from tumor followed by their analysis. The method of biopsy is highly invasive as it involves surgery, whereas the emerging of use of extracellular vesicles (EVs) such as exosomes and microvesicles (MVs), has led to development of non-invasive liquid biopsy. EVs are nanovesicle which are released from most of the cells, and biofluids including blood, cerebrospinal fluid, urine, etc. Their role has been found in metastasis of various cancer including glioma; a deadly brain cancer. Despite tremendous research on EVs, there has been a lack of clear consensus about the characterization of exosomes and MVs. Dr. Youngjin Lee (Department of Biomedical Sciences) and Prof. Chi-Man Lawrence Wu (Department of Material Science and Engineering) at City University of Hong Kong, discovered that the two important EVs derived from cancer cells react differently towards the gold nanoislands (AuNIs)-localised surface plasmon resonance (LSPR) biosensor. Their research team include Dr. Abhimanyu Thakur, Dr. Guangyue Qiu, Dr. Siu-Pang NG, Jintao Guan, and Dr. Jianbo Yue. Their discovery suggests that exosomes and MVs possess different biophysical characteristics, which can be useful for liquid biopsy in cancer diagnosis as well as prognosis. Their work has been published in a top journal related to biosensing (Thakur A et al, Biosensors and Bioelectronics 2017, 94: 400-407; DOI: 10.1016/j.bios.2017.03.036). Dr. Abhimanyu Thakur said, "Cancer derived exosomes and microvesicles have distinct biophysical characters, which can be used as a diagnostic marker. Our lab is still exploring this field by using advanced bioengineering tools such as atomic force microscopy (AFM), which are utilised for studying topological surface properties at nanometer to picometer scale". **E-mail: anantgarg5@gmail.com**

Healthcare Sector On Road To Recovery: Icra

New Delhi:- The healthcare sector is on a recovery path after two previous years of muted performance marred by several regulatory measures, rating agency Icra on Monday said. The sector's performance had been adversely impacted in the past two years due to the cap on prices of stents and knee implants by the National Pharmaceutical Pricing Authority (NPPA), adverse impact of the GST rollout on profitability and strict regulatory action taken by multiple states, Icra said in a release. "The strong performance of the sector is in line with our expectations. This is further supported by the average revenue per operating bed (ARPOB) which grew at a healthy 9 per cent in Q1 FY'20 against 3 per cent in FY'18 and 6 per cent in FY'19," Icra Group Head and SVP Shubham Jain said. The growth in the ARPOB in Q1 FY'20 is much higher than the six-year compounded annual growth rate (CAGR) of around 6 per cent, on account of the hike in tariffs undertaken, he added. On the flip side, the regulatory environment continues to be the overarching challenge for the hospital sector with the wide-ranging regulatory restrictions from multiple authorities suppressing their margins, Icra said. "We continue to believe the performance of healthcare companies will improve further over the medium term, though any incremental regulation may have a transient impact," Jain said. Structurally, in the long term, underlying fundamentals like the significant shortage of beds in the country and the increase in the disease burden and an ageing demographic profile continue to favour the sector.

Dr. Reddys Launches Generic Oral Anti Epileptic Drug In US

NEW DELHI:- Drug firm **Dr. Reddy's Laboratories** Mob:- 09368696718, 09410210556, 09359503863, 09329621787, 09368010386 on Tuesday said it has launched generic anti-epileptic Vigabatrin powder for oral solution in the US market. The product is a generic version of Lundbeck's Sabril powder for oral solution, Dr Reddy's said in a filing to the BSE. The company has launched Vigabatrin powder for oral solution, USP in 500 mg per packet after getting approval by the United States Food and Drug Administration (USFDA), it said. According to IMS Health data, Sabril

brand and generic had US sales of around USD 274 million (about Rs 1,900 crore) MAT for the most recent twelve months ending in June 2019, Dr Reddy's said. Sabril is indicated as adjunctive therapy for adults and pediatric patients of 10 years of age and older with refractory complex partial seizures who have inadequately responded to several alternative treatments and for whom the potential benefits outweigh the risk of vision loss.

Biocon Licenses Three Generic Formulation Products to China Medical System Holdings

Agreement Extends Biocon's Footprint to Greater China, the World's 2 nd Largest Pharma Market

Bengaluru, Karnataka:- **Biocon Ltd. Ph.:- +91 80 2808 2808** Asia's premier biopharmaceuticals company, today announced that it has signed a License and Supply Agreement with a subsidiary of China Medical System Holdings Ltd. (CMS) for three Generic Formulation products in Greater China. This development is in line with Biocon's long term generic formulations strategy and expands our Generic Formulations business footprint to the Chinese pharmaceuticals market, which is the second largest pharmaceutical market in the world. Under the terms of the agreement, Biocon will be responsible for the development, manufacturing and supply of the products. CMS will be responsible for registration and commercialization of the products in China. The total addressable market size for these three products in Mainland China is about US\$ 0.8 billion, as per recent IQVIA data. The initial term of the agreement shall be for 10 years from the date of commercialization, extendable by two years on a product basis by mutual consent. This collaboration can be extended to a broader portfolio in future.
