USFDA Finds several Violations In Aurobindo Sterile Injections Unit

NEW DELHI:- The US Food and Drug Administration has observed several violations and shortcomings in Aurobindo Pharma's sterile injections facility in Pashamylaram, Hyderabad, in yet another setback for the firm. FDA investigators have observed violations in sterilisation process to prevent microbial contamination and shortcomings in facility management procedures along with major protocol lapses in its sterile unit. The same unit had come under the FDA radar in March 2018. The inspection at Unit IV from November 4-13 found "procedures designed to prevent microbial contamination of drug products purporting to be sterile did not include adequate validation of the aseptic and sterilisation process ..," said the Form 483 'inspectional observation' report. ET has seen a copy of the Form 483 issued to Aurobindo Pharma. It said the unit does not follow established test procedures, and that senior company managers confirmed that sanitising is radically done.

Specifically, records of automatic, or electronic, including related systems maintained, control unit to review records to no errors have occurred and fully investigate errors that have," it said. ET first reported about the FDA inspections at the plant on November 5. Aurobindo did not respond to ET's emailed queries as of press time Friday. FDA investigators also found that the laboratory does not perform enough quality control check to ensure analysts are performing tests adequately on a consistent basis. "Laboratory records are deficient in that they do not include the initials and signatures of the person performing the tests and dates tests were performed," the report said. It also noted that employees are not given training in particular operations they perform, and observed lapses in the leachability studies and biocompatibility studies. The unit IV is Aurobindo's key injectable formulations plant, accounting for 9-10% of the firm's US sales and 50-60% of its total injectable sales in FY19. The plant also accounted for 8-9% of the company's overall operating profit during the period. Aurobindo will now have to respond to FDA with corrective measures to get the plant cleared within a stipulated time.

COPD से करे बचाव

कॉर्निक ऑब्स्ट्रक्टिव पल्मोनरी डिजीज (सीओपीडी) एक बीमारी नहीं है बल्कि बीमारियों का समूह है। इसमें साँस नली की सिकुड़ जाती है जिसके कारण फेफड़े भी डैमेज होने लगते हैं जिसे एम्फायसेमा कहते हैं। यह बीमारी सबसे पहले साँस लेने में रुकावट पैदा करती है। और इसके बाद हार्ट व किडनी आदि दूसरे अंगों को भी नुकसान पहुंचाती है। यह बीमारी स्पोकिंग और स्पोकिंग न करने वाले दोनों में होने वाली बीमारी है। सीओपीडी के लक्षण आमतौर पर 30 वर्ष की उम्र के बाद दिखते हैं। शुरू में सर्दी के सौमय में खांसी, बलगम आता है। इसके बाद अक्सर सर्दी-जूकाम की समस्या रहती है। तीव्रता बढ़ने पर सांस उखड़ती है। धूम्रपान करने वाला अस्थमा का रोगी है तो उसमें खतरा अधिक रहता है। इस बीमारी का प्रदूषण भी बड़ा कारण है। गांवों में चूहों पर खाना बनाने वाली महिलाओं को खतरा रहता है। इससे भी खतरा अधिक होता है। इसमें फेफड़ों को नुकसान होता है। धूम्रपान करने वाले 4 में से एक व्यक्ति को सीओपीडी होता है। धूम्रपान करने वाले घटनी होती है। इसके लिए इन्हेलर का इस्तेमाल किया जाता है। फेफड़ों में संक्रमण भी अधिक रहता है। इसमें पूरा फेफड़ा काम नहीं करता है तो शरीर में ऑक्सीजन की कमी होती है। इसके लिए बीच-बीच में ऑक्सीजन दी जाती है। इसके ठिकाने के लिए इन्हेलर का कृत्रिम साँस देते हैं खराक फेफड़ों को बुलाकर भी इलाज किया जाता है। यह सुविधा अपने देश में भी है। जरूरत के अन्याय रहती की तरह लंगस में भी स्टेंट डालकर इलाज किया जाता है। इसमें रोगियों को पौष्टिक एवं संतुलित आहार लेना चाहिए। इनमें एंटी-बायोटिक, एंटीइंफ्लामेटोरी एवं एंटी-ऑक्सीडेंड्स गुण वाली चीजें खाएं। वजन बढ़ने से परेशानी बढ़ती है। ऐसे में हाई प्रोटीन व लो कैलोरी वाली चीजें ही खानी चाहिए। जिनका वजन अधिक है वे लो कैलोरी डाइट लें। इसमें ताजे फल खाने काफी लाभदायक सिद्ध होते हैं। जो फेफड़ों के अंदरूनी मसल्स को स्वस्थ रखते हैं और अंदर के नुकसानदायक पदार्थों को बाहर निकालते हैं। इसलिए हर मौसम के ताजे फलों एवं सब्जियों को भरपूर मात्रा में डाइट में शामिल करें। डॉ. सूर्यकान्त, वरिष्ठ सांस रोग विशेषज्ञ और विभागाध्यक्ष।

दायबिटीज में कौन सा फल खायें?

फल स्वास्थ्य के लिए काफी फायदेमंद होते हैं। फलों में विटामिन, एंटीऑक्सीडेंट, फाइबर, मिनरल, आयरन और अन्य पौष्टक तत्व पाए जाते हैं। ये फल बढ़ा सकते हैं ब्लड शुगर लेवल • ड्राइ फ्रूट:- ड्राइ फ्रूट में शुगर की मात्रा अधिक होती है जैसे किशमिश, काजू इनमें पानी की मात्रा कम और शुगर की मात्रा अधिक होती है। इसलिए जरूरी है कि आप ड्राइ फ्रूट का सेवन सीमित मात्रा में करें यह इन्हें अधिक खाने से बचें। • हाई कार्ब वाले फल:- ताजे फल खाने स्वास्थ्य के लिए काफी अच्छे होते हैं लेकिन कुछ फलों से दूर रहना स्वास्थ्य के लिए जरूरी हैं क्योंकि ये तुरंत ब्लड शुगर लेवल बढ़ा देते हैं। जैसे केले, आम, सेब अधिक मात्रा में नहीं खाने चाहिए। इसलिए अपने फलों का चुनाव करते समय उनके आकार का ध्यान रखना चाहिए। इसके साथ ही जरूरी है कि फलों में कार्ब की मात्रा पर ध्यान रखें। • फलों का रस:- फलों का रस मरीजों को बिना डाक्टर के सलाह के बिना नहीं पीना चाहिए। जूस में शुगर की मात्रा अधिक होती है जो आपके शुगर को बढ़ा सकता है। इसलिए जूस की बजाए लोगों को ताजे फल की सलाह दी जाती है ताकि ब्लड शुगर को बढ़ने से रोका जा सके और अधिक से अधिक पौष्टक तत्व शरीर में जा सकें।
